

Zeikon Café partner news release

Taghleef Industries

Taghleef Industries takes a seat at Zeikon Café

Market leading packaging & label film manufacturer to demonstrate business winning portfolio

February 2015 – Taghleef Industries (*Ti*), one of the world's largest suppliers of BoPP, CPP, and PLA films, will present its market-leading solutions at the Zeikon Café Packaging Innovations event, taking place in Belgium from March 10 to 12 (www.xeikoncafe.com). Brand owner of NATIVIA™, EXTENDO™, DERPROSA™, SynDECOR™ and VISION™ trademarks, *Ti* produces 410,000 tons of specialized film for packaging, label, industrial and graphic arts applications. It has a manufacturing footprint in nine countries on five continents. At the Zeikon Café, the company will present its Injection in-mold and Pressure Sensitive/Self Adhesive BoPP label films during live demonstrations and workshops.

Lucija Kralj, Product Manager Label Films, who will be discussing Integrated Labels Solutions as part of the Technical Conference Program, comments: "We are delighted to have the opportunity to demonstrate how our product offering adapts to the latest digital printing technology and we are keen to engage with our audience during this unique event. We are also looking forward to connecting and networking with the key industry players who are eager to explore the potential of digital printing associated with the use of BoPP substrates. It will give *Ti* the opportunity to capture customers' interest, measure and analyze the market trends around our new technology."

Ti's films, both in-mold and self-adhesive films, can be printed with Zeikon's ground-breaking dry toner technology. In-mold films are specifically engineered to provide excellent static charge performance to allow optimal finishing and labelling efficiency. They deliver excellent bonding performance to polypropylene containers such as cups, tubs and lids and provide outstanding water resistance. The in-mold product portfolio includes different white voided options from ultra-high yield to high stiffness for different container sizes and after mold finishes. *Ti* self-adhesive films are used as facestock and release liner backing in self-adhesive label products. *Ti* films offer key attributes requested by end-users that include specific visual appearance properties, increased stiffness, speed of application for the end user, higher efficiency and better overall performance.

Throughout the Zeikon Café event, visitors will see demonstrations of the Taghleef LIG70 being used as backbone of the live in-mold application for thick walled plastic products. Within this demonstration it will be printed on a Zeikon 3500 and converted on Schober converting line.

Jeroen van Bauwel, Director Product Marketing at Zeikon, concludes: "Substrate consistency and reliability are vital to achieving standout print production results. Partnering with such a knowledgeable and widely-recognized expert in this field will give our customers the confidence to move into new markets and expand their revenue streams."

ABOUT TAGHLEEF INDUSTRIES

Headquartered in Dubai, *Ti* is the leading, customer focused supplier of films solutions to a global market place. With a manufacturing footprint in 9 countries on 5 continents, *Ti* produces 410,000Tons of specialized film for the packaging, labels, industrial and graphic arts applications.
