

## Taghleef Industries

Film:	<b>PPFB</b>
Thickness:	<b>60 µm, 65 µm</b>
Look:	<b>Pearlized White Opaque</b>

## Industrial Barrier Label Facestock

Taghleef's revolutionary new multi-layer barrier films for industrial labeling applications requiring barrier to oils and stains are now available.

### Partnership

This tire label was produced in three-way partnership between **Taghleef Industries**, **3Sigma** and **Domino**. Taghleef provided the proprietary facestock. 3Sigma coated the hotmelt adhesive designed for tire label applications as well as supplied the liner. The printing of this label was done using a Domino N610i digital label press using Dominos UV90 ink set. Domino also did the in-line die cutting.

### Features

- Barrier properties incorporated into the film itself (not as an added coating)
- High energy skin offering unmatched adhesion to the widest variety of adhesives
- Same superior print performance offered by *Ti*'s family of topcoated facestock films

### Technology

PPFB facestock utilizes *Ti*'s proprietary technology (patent pending) on the adhesive coated side of the film to provide a superior barrier solution. This same polymer provides an excellent high energy surface for adhesive bonding.

Combined with *Ti*'s top coating on the print side, this multi-layer film offers a truly integrated product designed as a solution to applications needing superior printed labels with unsurpassed barrier performance.

### Applications

- Tire labels
- Battery labels
- Wax and oil resistant industrial labels
